

The Engineering Leadership Program is a technical management program for final year engineering students pursuing full-time B.E/B. Tech degree across colleges in India.

On joining the Aditya Birla Group, in one of its manufacturing sectors, participants undergo a structured 12-months training on the shop floor, in the classroom and digitally.

Upon successful completion of the training period and subsequent confirmation at the end of the 12-month period, participants are placed into a full-time role in a technical function with any one of the group's manufacturing units.

The Group offers exciting learning and diverse career growth opportunities for young engineers by virtue of providing them with varied assignments within and across business throughout their tenure and aims to churn out Great Manufacturing Professionals.

Key Elements of the 12-months Training Period

- 3-day group induction will be followed by business-driven induction.
- The subsequent training will then be divided into phases wherein the first phase will be that of training consisting of two stints of 3 months each followed by 6 months of "On the Job Training" at any Unit location across India. The stints are aimed at enabling deep technical know-how of plant/ site processes.
- Reviews, feedback, and mentoring sessions will be conducted at the end of each stint within the unit with a view to developing and guiding the trainee.
- On confirmation, the participants will be provided with a final place of posting and a detailed job description of the final role based on performance during this time.

Please note: The place of posting would be at any of Aditya Birla's manufacturing plant/ site across India with any of the businesses of the group.

The Graduate Engineers will be given an opportunity to move across the Aditya Birla Group's Companies after the completion of a stipulated number of years at one Business, thus providing them with rich and varied experiences to grow and contribute to the organization.

Post Year 1, the program participants continue to benefit from:

- Continuous Learning & Development Initiatives
- Career Movements across ABG Businesses
